

Report

The second project was kind of difficult for me. I found it a little challenging to figure out how to use bootstrap and do the correct things I needed to in my index file. I am still not so sure about how to use Bootstrap, but I think I am getting the hang of it and by the end of the semester I will completely understand it. Bootstrap is interesting because it makes my web page come to life without me having to create all the extra elements that Bootstrap does for me. I do enjoy the easiness of Bootstrap. I used Google images to find the pictures for my web page and I made sure the pictures were free to use. While creating my assignment in Brackets, I continuously saved and opened a preview of my web page in Google Chrome. I liked seeing my web page develop each time I tested it. I found that this assignment took me about 3 hours to complete as I had to learn how to use Bootstrap correctly. Overall, I had fun designing my web page and using the interesting features of a Bootstrap template.
